

Green Building Credits that Weiser Products May Contribute To:

LEED Credits (New Construction, Existing Buildings, Commercial Interiors, Core & Shell, and Schools)

- *Materials & Resources Credit 4 Recycled Content (1-2 points):* Use materials such that the sum of the post-consumer recycled content plus one-half of the pre-consumer content constitutes at least 10% (based on cost) of the total value of the materials in the project (20% for 2 points).

The recycled content value of a material assembly is determined by weight. The recycled fraction of the assembly is then multiplied by the cost of the assembly to determine the recycled content value. The total recycled content value must make up 10% of the total project cost to obtain 1 point (or 20% for two points).

LEED Canada

- *Materials & Resources Credit 4 Recycled Content (1-2 points):* Use materials such that the sum of the post-consumer recycled content plus one-half of the pre-consumer content constitutes at least 7.5% (based on cost) of the total value of the materials in the project (15% for 2 points).

The recycled content value of a material assembly is determined by weight. The recycled fraction of the assembly is then multiplied by the cost of the assembly to determine the recycled content value. The total recycled content value must make up 7.5% of the total project cost to obtain 1 point (or 15% for two points).

LEED for Homes

- *Innovation & Design Credit (potential 1 point):* Innovative performance in Green Building categories not specifically addressed by the LEED-H Green Building Rating System. Recycled content in products not specifically covered in credit MR 2 EPP could achieve this credit (currently hardware products are not covered in the MR 2 EPP Credit). BDHHI should educate builders about the potential to achieve this credit by combining BDHHI and other products with recycled content not covered in MR 2 EPP.

NAHB National Green Building Standard

- *604.1 Recycled Content (1 point):* Use at least 2 recycled-content materials for two minor components.
- *610.1 Manufacturer's Environmental Management System Concepts (1-10 points):* Product manufacturer's operations and business practices include environmental management system concepts, and the production facility is ISO 14001 <<http://www.nahbgreen.org/GreenStandard/Standard/ScoringTool.aspx?ProjectID=pKtk3uEsXYI%3d&ActivePPID=CkvLeYMPd0o%3d&BP=1%7C31%7C145%7C389>> certified or equivalent. The aggregate value of building products from ISO 14001 certified or equivalent production facilities is 1% or more of the estimated total building materials cost. One point is awarded for every percent up to ten points.
